

Declaration of PU foam composition

Megaflex declares that all produced PU foams do not contain substances of animal origin. MEGAFLEX never added to the foam and does not apply to the production of animal substances, such as milk, fat, meat or other products made of animals. Our machines also do not use any products of animal origin, and do not contain vegetable substances like oils. Products and semi-finished products, intermediates used in the production of foam come from the processing of crude oil. Raw materials for using Megaflex PU foams are polyether polyols, toluene diisocyanate, water, structure stabilizers, catalysts controlling foaming and gelling reactions, and pigments. The finished product-polyurethane foam is a product that is safe for health, neutral to the environment, is a product that can be recycled to semi-finished products and meets the requirements of Reach. no. 1907/2006/EC of the EU-Parliament.
